# MATRIX<sup>NEWORLD</sup> Southwest Groundwater

November 9, 2021

Community Working Group  
c/o Godec, Randall & Associates, Inc.  
3944 North 14th Street  
Phoenix, Arizona 85014

**SUBJECT: 3rd QUARTER 2021 SAMPLING REPORT – COMMUNITY MONITORING PROGRAM FOR THE RESOLUTION COPPER PROJECT**

Dear Community Working Group:

Matrix New World Engineering, Land Surveying and Landscape Architecture, PC (Matrix) has prepared the following report to document the results of the 3<sup>rd</sup> Quarter sampling event of 2021 for the Community Monitoring Program for the Resolution Copper Project – Sample Collection and Reporting as requested by the Superior Community Working Group (CWG). In addition to the scheduled quarterly sampling activities, biannual sampling was added at a former domestic well location in Skunk Creek, but not sampled during the 3<sup>rd</sup> Quarter activities.

## **SAMPLING ACTIVITIES**

The 3<sup>rd</sup> Quarter sampling event, which was coordinated with CWG and representatives of Resolution Copper Company (RCC), was conducted on September 29, 2021. Samples were collected at the following locations:

- BTA-01 (“Gallery Well”) located in the Boyce Thompson Arboretum.
- Monitor Well 002-2, also known as the “Castleberry Well” located upgradient of the other sampled wells.
- Monitor Well DS17-17 (DS-Q), also known as the “Martin Well” located downgradient of the other sampled wells.

The locations were selected by representatives of RCC and CWG based on their potential to identify changes in water quality due to future mining activities proposed by RCC.

All of the sampling work was completed in accordance with the Scope of Services outlined in the CWG Request for Proposal. The approximate sampling locations are shown on Figure 1, included in Attachment I. A brief description of the sampling activities that were completed at each sample location is provided below.

### **BTA-01 – Gallery Well**

The Gallery Well consists of a shallow, concrete block lined subsurface shaft situated within a single room “pump house” located on the north bank of Queen Creek. The total depth of the shaft is not known by Matrix. The pump house is located in the southeast portion of Boyce Thompson Arboretum (Figure 1).

The depth to water was measured at approximately 15 feet from the floor of the pump house when the samples were collected by RCC and Matrix. Samples of groundwater were collected at the Gallery Well by representatives of RCC using a weighted bucket deployed from a spool of rope. The sampling equipment was decontaminated prior to use. RCC completed their sampling process by pouring water directly from the bucket into laboratory supplied containers. Matrix used the same equipment and process to fill sample containers provided by Eurofins TestAmerica (formerly Xenco Laboratories).

In addition to the selected analyte list described below, an additional sample was collected at the BTA-01 well and analyzed for Per- and Polyfluoroalkyl Substances (PFAS) based on conversations between Matrix and CWG to determine if there were any effects of fire suppressants used on the fires in Superior in 2021 near the BTA-01 well. Matrix followed sampling guidance provided by the Interstate Technology and Regulatory Council (ITRC) and the Environmental Protection Agency (EPA) to ensure cross-contamination did not occur.

### **Monitor Well 002-2 – Castleberry Well**

The Castleberry Well is a shallow monitoring well located east of Boyce Thompson Arboretum on the north side of Queen Creek, approximately 2 miles west/southwest of the Town of Superior (Figure 1). Reportedly, the well was installed to a depth of approximately 20 feet below land surface (ft bls).

At the time of sampling, RCC installed a temporary submersible pump in the Castleberry well and purged the well at a low flow rate of approximately 500 milliliters per minute (mL/min) to ensure that a representative sample would be collected. The discharged water was pumped directly into a bucket and was disposed away from the well location. Samples were collected directly from the discharge hose on the submersible pump. The depth to water in the Castleberry Well was measured at 4.99 ft bls.

### **Monitor Well DS17-17 (DS-Q) “Martin Well”**

Monitor Well DS17-17 (DS-Q) was installed in early 2017 and is located north of Highway 60, approximately 3.25 miles northwest of Boyce Thompson Arboretum (Figure 1). Monitor Well DS17-17 is located reportedly near the area of a future mine tailings stockpile. Based on a diagram of well construction provided by RCC, the well was installed to a depth of approximately 30 ft bls and is perforated from 10 to 30 ft bls. The inside diameter of the PVC casing is 4 inches. Depth to water at DS17-17 was 25.67 ft bls. At the time of sampling, RCC installed a temporary submersible pump in the Martin well and purged the well at a low flow rate of approximately 500 mL/min to ensure that a representative sample would be collected. The discharged water was pumped directly into a bucket and was disposed away from the well location. Samples were collected directly from the discharge hose on the submersible pump.

## **ANALYTICAL RESULTS**

The collected water samples were placed in laboratory supplied containers, sealed, labeled and stored in a cooler containing ice for preservation. The samples were submitted to Eurofins TestAmerica in Phoenix, Arizona and analyzed for inorganic parameters including Total Dissolved Solids (TDS), Nitrate as Nitrogen, Nitrite as Nitrogen, Nitrate-Nitrite as Nitrogen, Fluoride, Sulfate, Chloride, and Total Cyanide; Radionuclides including Gross Alpha and Radium 226+228; and the following metals: Antimony, Arsenic, Barium, Beryllium, Cadmium, Copper, Lead, Mercury, Nickel, Selenium, and Thallium.

The analyte list was selected by RCC and confirmed by CWG to provide a baseline evaluation of water quality at selected locations prior to the mining activities that are proposed by RCC. Once mining activities have started, future analyses of samples collected at those same locations can be used to identify trends or potential changes in water quality when compared to the baseline results.

The PFAS analyte list was selected to provide a general overview of 18 PFAS compounds that might be found in the fire retardant used nearby BTA-01, including Perfluorooctanoic acid (PFOA) and Perfluorooctanesulfonic acid (PFOS). PFOA and PFOS are listed in the EPAs Health Advisory Level not to exceed a combined total of 70 nanograms per liter (ng/L). Results of the PFAS sampling show PFOA and PFOS combined were 31 ng/L. Although the results are below EPAs Health Advisory Level, Matrix is unable to determine the source of the detections without conducting an additional investigation.

Analytical results for the 1<sup>st</sup> through 3<sup>rd</sup> Quarters of 2021; 2<sup>nd</sup> and 3<sup>rd</sup> Quarters of 2020; 1<sup>st</sup> through 4<sup>th</sup> Quarters of 2019; 1<sup>st</sup> through 4<sup>th</sup> Quarters of 2018; and 1<sup>st</sup> through 4<sup>th</sup> Quarters of 2017 for samples collected from the Gallery Well, Ayer Lake, Castleberry Well, DS17-17 are summarized in Tables 1-4, respectively, included in Attachment II. Table 6 shows the results of the 18 selected analytes for PFAS compounds including the PFOA and PFOS combined total in Attachment II. The complete analytical laboratory report for the 3<sup>rd</sup> Quarter 2021 samples is included in Attachment III.

Tables 1-4 list the U.S. EPA Maximum Contaminant Level (MCL) and Secondary MCL for drinking (potable) water. The pond and the wells sampled are not used as drinking water sources; the MCL and secondary MCL values are provided for reference only and give an assessment of the relative quality of the sampled water.

Overall, the quality of the water samples as evidenced by the analytical results were good. The results of the 3<sup>rd</sup> Quarter 2021 sampling event were consistent with the results from the previous sampling events for the Gallery

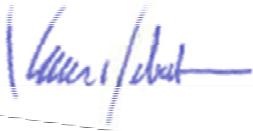

Well, Martin Well, and Castleberry Well. As was the case with the previous quarters, arsenic was the only constituent in the samples collected during the 3<sup>rd</sup> Quarter of 2021 sampling event that was detected at a concentration that exceeded its drinking water MCL.

The scope of Matrix's work is limited to oversight of sample collection, submission to an independent laboratory for analysis and reporting of the results; no opinion is rendered regarding whether or not the current results are representative of natural background conditions, seasonal fluctuations, or have been potentially impacted by historical activities conducted in the area.

Please call if you have any questions or require additional information.

Sincerely,

**Matrix New World Engineering**

Kevin D. Hebert, R.G.  
Senior Project Hydrogeologist

## Qualifiers

### HPLC/IC

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

### LCMS

Qualifier	Qualifier Description
T3	Method not promulgated either by EPA or ADHS.

### Metals

Qualifier	Qualifier Description
H6	The filtration was not done within the required 15 minutes of sampling, the sample was filtered in the laboratory.

### General Chemistry

Qualifier	Qualifier Description
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.

## Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
%	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

# Case Narrative

Client: Matrix New World Engineering  
Project/Site: Community Working Group

Job ID: 550-171376-1

## Job ID: 550-171376-1

### Laboratory: Eurofins TestAmerica, Phoenix

#### Narrative

#### Job Narrative 550-171376-1

#### Comments

No additional comments.

#### Receipt

The samples were received on 9/29/2021 1:46 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.2° C and 2.4° C.

#### Receipt Exceptions

Unsure if all radiation methods need to be dissolved or if the 226/228 Radium are dissolved only?  
Radiation methods will need to be added for samples #1 - #3.

Used 2 different projects to complete the login (General/NA Misc. and PFAS projects).

DS-Q-09292021 (550-171376-1), BTA-01-09292021 (550-171376-2), 002-2-09292021 (550-171376-3), BTA-01-PFAS-09292021 (550-171376-4) and Field Blank (550-171376-5)

#### HPLC/IC

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### Metals

Method Filtration: The following samples requested dissolved metals and were not filtered in the field: DS-Q-09292021 (550-171376-1), BTA-01-09292021 (550-171376-2) and 002-2-09292021 (550-171376-3). These samples were filtered and preserved upon receipt to the laboratory.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### LCMS

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### Organic Prep

Method 3535: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 320-531103.

Method: 3535\_PFC-W

Matrix: Aqueous

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### Lab Admin

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analytic & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/testmatrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins TestAmerica.

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analytic & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/test/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins TestAmerica.

## Login Sample Receipt Checklist

Client: Matrix New World Engineering

Job Number: 550-171376-1

**Login Number:** 171376

**List Source:** Eurofins TestAmerica, Phoenix

**List Number:** 1

**Creator:** Gravlin, Andrea

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.
